SUMMARY INFORMATION

AllianceBernstein VPS Balanced Wealth Strategy Portfolio

INVESTMENT OBJECTIVE

The Portfolio's investment objective is to maximize total return consistent with the Adviser's determination of reasonable risk.

FEES AND EXPENSES OF THE PORTFOLIO

This table describes the fees and expenses that you may pay if you buy and hold shares of the Portfolio. The operating expenses information below is designed to assist Contractholders of variable products that invest in the Portfolio in understanding the fees and expenses that they may pay as an investor. Because the information does not reflect deductions at the separate account level or contract level for any charges that may be incurred under a contract, Contractholders that invest in the Portfolio should refer to the variable contract prospectus for a description of fees and expenses that apply to Contractholders. Inclusion of these charges would increase the fees and expenses provided below.

Shareholder Fees (fees paid directly from your investment)

N/A

Annual Portfolio Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	.55%
Distribution (12b-1) Fees	.25%
Other Expenses	.15%
Total Portfolio Operating Expenses	<u>.95%</u>

Examples

The Examples are intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. The Examples assume that you invest \$10,000 in the Portfolio for the time periods indicated and then redeem all of your shares at the end of those periods. The Examples also assume that your investment has a 5% return each year, that the Portfolio's operating expenses stay the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

After 1 Year	\$ 97
After 3 Years	\$ 303
After 5 Years	\$ 525
After 10 Years	\$1,166

Portfolio Turnover

The Portfolio pays transactions costs, such as commissions, when it buys or sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These transaction costs, which are not reflected in the Annual Portfolio Operating Expenses or in the Examples, affect the Portfolio's performance. During the most recent fiscal year, the Portfolio's portfolio turnover rate was 85% of the average value of its portfolio.

PRINCIPAL STRATEGIES

The Portfolio invests in a portfolio of equity and debt securities that is designed as a solution for investors who seek a moderate tilt toward equity returns but also want the risk diversification offered by debt securities and the broad diversification of their equity risk across styles, capitalization ranges and geographic regions. The Portfolio targets a weighting of 60% equity securities and 40% debt securities with a goal of providing moderate upside potential without excessive volatility. In managing the Portfolio, the Adviser efficiently diversifies between the debt and equity components to produce the desired risk/return profile. Investments in real estate investment trusts, or REITs, are deemed to be 50% equity and 50% fixed-income for purposes of the overall target blend of the Portfolio.

The Portfolio's equity component is diversified between growth and value equity investment styles, and between U.S. and non-U.S. markets. The Adviser selects growth and value equity securities by drawing from a variety of its fundamental growth and

value investment disciplines to produce a blended equity component. Within each equity investment discipline, the Adviser may draw on the capabilities of separate investment teams specializing in different capitalization ranges and geographic regions (U.S. and non-U.S.). Accordingly, in selecting equity investments for the Portfolio, the Adviser is able to draw on the resources and expertise of multiple growth and value equity investment teams, which are supported by more than 50 equity research analysts specializing in growth research, and more than 50 equity research analysts specializing in value research.

The Adviser's targeted blend for the non-REIT portion of the Portfolio's equity component is an equal weighting of growth and value stocks (50% each).

In addition to blending growth and value styles, the Adviser blends each style-based portion of the Portfolio's equity component across U.S. and non-U.S. issuers and various capitalization ranges. Within each of the value and growth portions of the Portfolio, the Adviser normally targets a blend of approximately 70% in equities of U.S. companies and the remaining 30% in equities of companies outside the U.S. The Adviser will also allow the relative weightings of the Portfolio's equity and debt, growth and value, and U.S. and non-U.S. component to vary in response to markets, but ordinarily only by $\pm 5\%$ of the Portfolio. Beyond those ranges, the Adviser will generally rebalance the Portfolio toward the targeted blend. However, under extraordinary circumstances, when the Adviser believes that conditions favoring one investment component are compelling, the range may expand to 10% of the Portfolio. The Portfolio's targeted blend may change from time to time without notice to shareholders based on the Adviser's assessment of underlying market conditions.

The Adviser selects the Portfolio's growth stocks using its growth investment discipline. Each growth investment team selects stocks using a process that seeks to identify companies with strong management, superior industry positions, excellent balance sheets and superior earnings growth prospects. This discipline relies heavily upon the fundamental analysis and research of the Adviser's large internal growth research staff, which follows over 1,500 U.S. and non-U.S. issuers. As one of the largest multi-national investment firms, the Adviser has access to considerable information concerning these companies, including an in-depth understanding of their products, services, markets and competition as well as a good knowledge of the management of most of the companies.

The Adviser's growth analysts prepare their own earnings estimates and financial models for each company followed. Research emphasis is placed on identifying companies whose substantially above-average prospective earnings growth is not fully reflected in current market valuations. Each growth investment team constructs a portfolio that emphasizes equity securities of a limited number of carefully selected, high-quality companies that are judged likely to achieve superior earnings growth.

The Adviser selects the Portfolio's value stocks using its fundamental value investment discipline. In selecting stocks, each of the Adviser's value investment teams seeks to identify companies whose long-term earning power and dividend paying capability are not reflected in the current market price of their securities. This fundamental value discipline relies heavily upon the Adviser's large internal value research staff, which follows over 1,500 U.S. and non-U.S. issuers. Teams within the value research staff cover a given industry worldwide to better understand each company's competitive position in a global context.

The Adviser's staff of company and industry analysts prepares its own earnings estimates and financial models for each company analyzed. The Adviser identifies and quantifies the critical variables that control a business's performance and analyzes the results in order to forecast each company's long-term prospects and expected returns. Through application of the value investment process described above, each value investment team constructs a portfolio that emphasizes equity securities of a limited number of value companies.

In selecting fixed-income investments for the Portfolio, the Adviser may draw on the capabilities of separate investment teams that specialize in different areas that are generally defined by the maturity of the debt securities and/or their ratings and which may include subspecialties (such as inflation-protected securities). These fixed-income investment teams draw on the resources and expertise of the Adviser's large internal fixed-income research staff, which includes over 50 dedicated fixed-income research analysts and economists. The Portfolio's debt securities will primarily be investment grade debt securities, but is expected to include lower-rated securities ("junk bonds") and preferred stock. The Portfolio will not invest more than 25% of its net assets in securities rated at the time of purchase below investment grade.

The Portfolio may invest in convertible securities, enter into repurchase agreements and forward commitments, and make short sales of securities or maintain a short position, but only if at all times when a short position is open not more than 33% of its net assets is held as collateral for such short sales. The Portfolio may enter into derivatives transactions, such as options, futures, forwards, and swap agreements.

PRINCIPAL RISKS:

- **Market Risk:** The value of the Portfolio's assets will fluctuate as the stock or bond market fluctuates. The value of its investments may decline, sometimes rapidly and unpredictably, simply because of economic changes or other events that affect large portions of the market.

- **Interest Rate Risk:** Changes in interest rates will affect the value of investments in fixed-income securities. When interest rates rise, the value of investments in fixed-income securities tend to fall and this decrease in value may not be offset by higher income from new investments. Interest rate risk is generally greater for fixed-income securities with longer maturities or durations.
- **Credit Risk:** An issuer or guarantor of a fixed-income security, or the counterparty to a derivatives or other contract, may be unable or unwilling to make timely payments of interest or principal, or to otherwise honor its obligations. The issuer or guarantor may default causing a loss of the full principal amount of a security. The degree of risk for a particular security may be reflected in its credit rating. There is the possibility that the credit rating of a fixed-income security may be downgraded after purchase, which may adversely affect the value of the security. Investments in fixed-income securities with lower ratings tend to have a higher probability that an issuer will default or fail to meet its payment obligations.
- **Below Investment Grade Security Risk:** Investments in fixed-income securities with lower ratings (“junk bonds”) tend to have a higher probability that an issuer will default or fail to meet its payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond market generally and less secondary market liquidity.
- **Foreign (Non-U.S.) Risk:** Investment in securities of non-U.S. issuers may involve more risk than those of U.S. issuers. These securities may fluctuate more widely in price and may be less liquid due to adverse market, economic, political, regulatory or other factors.
- **Currency Risk:** Fluctuations in currency exchange rates may negatively affect the value of the Portfolio’s investments or reduce its returns.
- **Allocation Risk:** The allocation of investments among the different investment styles, such as growth or value, equity or debt securities, or U.S. or non-U.S. securities may have a more significant effect on the Portfolio’s net asset value, or NAV, when one of these investment strategies is performing more poorly than others.
- **Capitalization Risk:** Investments in small- and mid-capitalization companies may be more volatile than investments in large-cap companies. Investments in small-cap companies may have additional risks because these companies have limited product lines, markets or financial resources.
- **Short Sale Risk:** The Portfolio may not always be able to close out a short position on favorable terms. Short sales involve the risk that the Portfolio will incur a loss by subsequently buying a security at a higher price than the price at which it sold the security short. The amount of such loss is theoretically unlimited (since it is limited only by the increase in value of the security sold short by the Portfolio.) In contrast, the risk of loss from a long position is limited to the Portfolio’s investment in the long position, since its value cannot fall below zero. Short selling is a form of leverage. To mitigate leverage risk, the Portfolio will always hold liquid assets (including its long positions) at least equal to its short position exposure, marked-to-market daily.
- **Derivatives Risk:** Derivatives may be illiquid, difficult to price, and leveraged so that small changes may produce disproportionate losses for the Portfolio, and may be subject to counterparty risk to a greater degree than more traditional investments.
- **Real Estate Risk:** The Portfolio’s investments in the real estate market have many of the same risks as direct ownership of real estate, including the risk that the value of real estate could decline due to a variety of factors that affect the real estate market generally. Investments in REITs may have additional risks. REITs are dependent on the capability of their managers, may have limited diversification, and could be significantly affected by changes in tax laws.
- **Management Risk:** The Portfolio is subject to management risk because it is an actively managed investment fund. The Adviser will apply its investment techniques and risk analyses in making investment decisions for the Portfolio, but there is no guarantee that its techniques will produce the intended results.

As with all investments, you may lose money by investing in the Portfolio.

BAR CHART AND PERFORMANCE INFORMATION

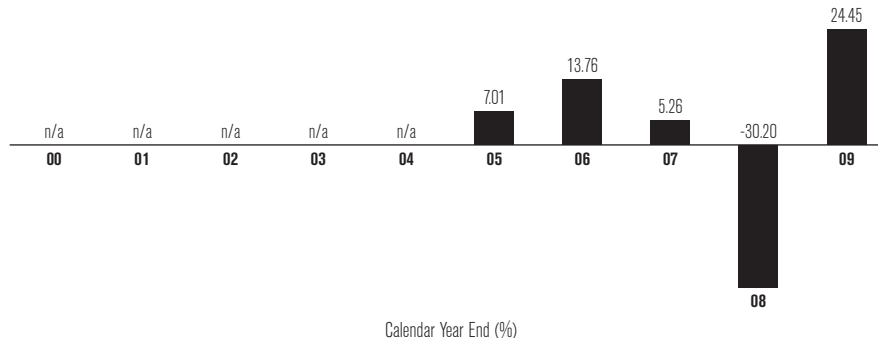

The bar chart and performance information provide an indication of the historical risk of an investment in the Portfolio by showing:

- how the Portfolio’s performance changed from year to year over the life of the Portfolio; and
- how the Portfolio’s average annual returns for one and five years and over the life of the Portfolio compare to those of a broad-based securities market index.

An additional index is included in the performance table to show how the Portfolio’s performance compares with an index of fixed-income securities similar to those in which the Portfolio invests. You may obtain updated performance information on the Portfolio’s website at www.AllianceBernstein.com (click on “Pricing & Performance”).

The performance information does not take into account separate account charges. If separate account charges were included, an investor's return would be lower. The Portfolio's past performance, of course, does not necessarily indicate how it will perform in the future.

Bar Chart

During the period shown in the bar chart, the Portfolio's:

Best Quarter was up 15.06%, 3rd quarter, 2009; and Worst Quarter was down -14.71%, 4th quarter, 2008.

Performance Table

Average Annual Total Returns

(For the periods ended December 31, 2009)

	1 Year	5 Years	Since Inception
Portfolio (Inception Date: July 1, 2004)	24.45%	2.16%	3.17%
S&P 500 Stock Index (reflects no deduction for fees, expenses, or taxes)	26.46%	0.42%	1.84%
Barclays Capital U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	5.93%	4.97%	5.22%
60% S&P 500 Stock Index/40% Barclays Capital U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	18.40%	2.54%	3.49%

INVESTMENT ADVISER

AllianceBernstein L.P. is the investment adviser for the Portfolio.

PORTFOLIO MANAGERS

The following table lists the persons responsible for day-to-day management of the Portfolio's portfolio:

Employee	Length of Service	Title
Thomas J. Fontaine	Since July 2008	Senior Vice President of the Adviser
Dokyoung Lee	Since July 2008	Senior Vice President of the Adviser
Seth J. Masters	Since 2005	Executive Vice President of the Adviser
Christopher H. Nikolich	Since 2005	Senior Vice President of the Adviser
Patrick J. Rudden	Since February 2009	Senior Vice President of the Adviser

- **PURCHASE AND SALE OF PORTFOLIO SHARES**

The Portfolio offers its shares through the separate accounts of life insurance companies (“Insurers”). You may only purchase and sell shares through these separate accounts. See the prospectus of the separate account of the participating insurance company for information on the purchase and sale of the Portfolio’s shares.

- **TAX INFORMATION**

The Portfolio may make income dividends or capital gains distribution. The income and capital gains distribution will be made in shares of the Portfolio. See the prospectus of the separate account of the participating insurance company for federal income tax information.

- **PAYMENTS TO INSURERS AND OTHER FINANCIAL INTERMEDIARIES**

If you purchase shares of the Portfolio through an Insurer or other financial intermediary, the Portfolio and its related companies may pay the intermediary for the sale of Portfolio shares and related services. These payments may create a conflict of interest by influencing the Insurer or other financial intermediary and your salesperson to recommend the Portfolio over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE PORTFOLIO'S RISKS AND INVESTMENTS

This section of the Prospectus provides additional information about the Portfolio's investment practices and risks. Most of these investment practices are discretionary, which means that the Adviser may or may not decide to use them. This Prospectus does not describe all of the Portfolio's investment practices and additional descriptions of the Portfolio's strategies, investments, and risks can be found in the Fund's Statement of Additional Information ("SAI").

DERIVATIVES

The Portfolio may, but is not required to, use derivatives for risk management purposes or as part of its investment strategies. Derivatives are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. The Portfolio may use derivatives to earn income and enhance returns, to hedge or adjust the risk profile of a portfolio, to replace more traditional direct investments and to obtain exposure to otherwise inaccessible markets.

There are four principal types of derivatives, including options, futures, forwards and swaps, which are described below. Derivatives may be (i) standardized, exchange-traded contracts or (ii) customized, privately negotiated contracts. Exchange-traded derivatives tend to be more liquid and subject to less credit risk than those that are privately negotiated.

The Portfolio's use of derivatives may involve risks that are different from, or possibly greater than, the risks associated with investing directly in securities or other more traditional instruments. These risks include the risk that the value of a derivative instrument may not correlate perfectly, or at all, with the value of the assets, reference rates, or indices that they are designed to track. Other risks include: the possible absence of a liquid secondary market for a particular instrument and possible exchange-imposed price fluctuation limits, either of which may make it difficult or impossible to close out a position when desired; and the risk that the counterparty will not perform its obligations. Certain derivatives may have a leverage component and involve leverage risk. Adverse changes in the value or level of the underlying asset, note or index can result in a loss substantially greater than the Portfolio's investment (in some cases, the potential loss is unlimited).

The Portfolio's investments in derivatives may include, but are not limited to, the following:

- **Forward Contracts.** A forward contract is a customized, privately negotiated agreement for one party to buy, and the other party to sell, a specific quantity of an underlying commodity or other tangible asset for an agreed upon price at a future date. A forward contract is either settled by physical delivery of the commodity or tangible asset to an agreed-upon location at a future date, rolled forward into a new forward contract or, in the case of a non-deliverable forward, by a cash payment at maturity. The Portfolio's investments in forward contracts may include the following:
 - Forward Currency Exchange Contracts. The Portfolio may purchase or sell forward currency exchange contracts for hedging purposes to minimize the risk from adverse

changes in the relationship between the U.S. Dollar and other currencies or for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under "Currency Transactions". The Portfolio, for example, may enter into a forward contract as a transaction hedge (to "lock in" the U.S. Dollar price of a non-U.S. Dollar security), as a position hedge (to protect the value of securities the Portfolio owns that are denominated in a foreign currency against substantial changes in the value of the foreign currency) or as a cross-hedge (to protect the value of securities the Portfolio owns that are denominated in a foreign currency against substantial changes in the value of that foreign currency by entering into a forward contract for a different foreign currency that is expected to change in the same direction as the currency in which the securities are denominated).

- **Futures Contracts and Options on Futures Contracts.**

A futures contract is an agreement that obligates the buyer to buy and the seller to sell a specified quantity of an underlying asset (or settle for cash the value of a contract based on an underlying asset, rate or index) at a specific price on the contract maturity date. Options on futures contracts are options that call for the delivery of futures contracts upon exercise. The Portfolio may purchase or sell futures contracts and options thereon to hedge against changes in interest rates, securities (through index futures or options) or currencies. The Portfolio may also purchase or sell futures contracts for foreign currencies or options thereon for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under "Currency Transactions".

- **Options.** An option is an agreement that, for a premium payment or fee, gives the option holder (the buyer) the right but not the obligation to buy (a "call option") or sell (a "put option") the underlying asset (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the exercise price) during a period of time or on a specified date. Investments in options are considered speculative. The Portfolio may lose the premium paid for them if the price of the underlying security or other asset decreased or remained the same (in the case of a call option) or increased or remained the same (in the case of a put option). If a put or call option purchased by the Portfolio were permitted to expire without being sold or exercised, its premium would represent a loss to the Portfolio. The Portfolio's investments in options include the following:

- Options on Foreign Currencies. The Portfolio may invest in options on foreign currencies that are privately negotiated or traded on U.S. or foreign exchanges for hedging purposes to protect against declines in the U.S. Dollar value of foreign currency denominated securities held by the Portfolio and against increases in the U.S. Dollar cost of securities to be acquired. The purchase of an option on a foreign currency may constitute an

effective hedge against fluctuations in exchange rates, although if rates move adversely, the Portfolio may forfeit the entire amount of the premium plus related transaction costs. The Portfolio may also invest in options on foreign currencies for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under “Currency Transactions”.

- Options on Securities. The Portfolio may purchase or write a put or call option on securities. The Portfolio will only exercise an option it purchased if the price of the security was less (in the case of a put option) or more (in the case of a call option) than the exercise price. If the Portfolio does not exercise an option, the premium it paid for the option will be lost. The Portfolio may write covered options, which means writing an option for securities the Portfolio owns, and uncovered options.
- Options on Securities Indices. An option on a securities index is similar to an option on a security except that, rather than taking or making delivery of a security at a specified price, an option on a securities index gives the holder the right to receive, upon exercise of the option, an amount of cash if the closing level of the chosen index is greater than (in the case of a call) or less than (in the case of a put) the exercise price of the option.
- **Swap Transactions.** A swap is a customized, privately negotiated agreement that obligates two parties to exchange a series of cash flows at specified intervals (payment dates) based upon, or calculated by, reference to changes in specified prices or rates (interest rates in the case of interest rate swaps, currency exchange rates in the case of currency swaps) for a specified amount of an underlying asset (the “notional” principal amount). Except for currency swaps, the notional principal amount is used solely to calculate the payment stream, but is not exchanged. Swaps are entered into on a net basis (i.e., the two payment streams are netted out, with the Portfolio receiving or paying, as the case may be, only the net amount of the two payments). The Portfolio’s investments in swap transactions include the following:
 - Interest Rate Swaps, Swaptions, Caps, and Floors. Interest rate swaps involve the exchange by the Portfolio with another party of their respective commitments to pay or receive interest (e.g., an exchange of floating rate payments for fixed rate payments). Unless there is a counterparty default, the risk of loss to the Portfolio from interest rate transactions is limited to the net amount of interest payments that the Portfolio is contractually obligated to make. If the counterparty to an interest rate transaction defaults, the Portfolio’s risk of loss consists of the net amount of interest payments that the Portfolio contractually is entitled to receive.
 - An option on a swap agreement, also called a “swaption,” is an option that gives the buyer the right, but not the obligation, to enter into a swap on a future date in exchange for paying a market-based “premium.” A receiver swaption gives the owner the right to receive the total

return of a specified asset, reference rate, or index. A payer swaption gives the owner the right to pay the total return of a specified asset, reference rate, or index. Swaptions also include options that allow an existing swap to be terminated or extended by one of the counterparties.

The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payments of interest on a contractually-based principal amount from the party selling the interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on an agreed principal amount from the party selling the interest rate floor. Caps and floors may be less liquid than swaps.

Interest rate swap, cap, and floor transactions may be used to preserve a return or spread on a particular investment or a portion of the Portfolio’s portfolio or to protect against an increase in the price of securities the Portfolio anticipates purchasing at a later date. The Portfolio may enter into interest rate swaps, caps, and floors on either an asset-based or liability-based basis, depending on whether it is hedging its assets or liabilities.

- Credit Default Swap Agreements. The “buyer” in a credit default swap contract is obligated to pay the “seller” a periodic stream of payments over the term of the contract in return for a contingent payment upon the occurrence of a credit event with respect to an underlying reference obligation. Generally, a credit event means bankruptcy, failure to pay, obligation acceleration or modified restructuring. The Portfolio may be either the buyer or seller in the transaction. If the Portfolio is a seller, the Portfolio receives a fixed rate of income throughout the term of the contract, which typically is between one month and five years, provided that no credit event occurs. If a credit event occurs, the Portfolio typically must pay the contingent payment to the buyer, which is typically the “par value” (full notional value) of the reference obligation. The contingent payment may be a cash payment or by physical delivery of the face amount of the reference obligation in return for payment of the obligation. The value of the reference obligation received by the Portfolio coupled with the periodic payments previously received may be less than the full notional value it pays to the buyer, resulting in a loss of value to the Portfolio. If the Portfolio is a buyer and no credit event occurs, the Portfolio will lose its periodic stream of payments over the term of the contract. However, if a credit event occurs, the buyer typically receives full notional value for a reference obligation that may have little or no value.

Credit default swaps may involve greater risks than if the Portfolio had invested in the reference obligation directly. Credit default swaps are subject to general market risk, liquidity risk and credit risk.

- Currency Swaps. The Portfolio may invest in currency swaps for hedging purposes to protect against adverse changes in exchange rates between the U.S. Dollar and other currencies or for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under “Currency Transactions”. Currency swaps involve the individually negotiated exchange by the Portfolio with another party of a series of payments in specified currencies. Actual principal amounts of currencies may be exchanged by the counterparties at the initiation, and again upon the termination, of the transaction. Therefore, the entire principal value of a currency swap is subject to the risk that the swap counterparty will default on its contractual delivery obligations. If there is a default by the counterparty to the transaction, the Portfolio will have contractual remedies under the transaction agreements.

- **Other Derivatives and Strategies.**

- Currency Transactions. The Portfolio may invest in non-U.S. Dollar-denominated securities on a currency hedged or unhedged basis. The Adviser may actively manage the Portfolio’s currency exposures and may seek investment opportunities by taking long or short positions in currencies through the use of currency-related derivatives, including forward currency exchange contracts, futures and options on futures, swaps and options. The Adviser may enter into transactions for investment opportunities when it anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Portfolio and do not present attractive investment opportunities. Such transactions may also be used when the Adviser believes that it may be more efficient than a direct investment in a foreign currency-denominated security. The Portfolio may also conduct currency exchange contracts on a spot basis (*i.e.*, for cash at the spot rate prevailing in the currency exchange market for buying or selling currencies).

CONVERTIBLE SECURITIES

Prior to conversion, convertible securities have the same general characteristics as non-convertible debt securities which generally provide a stable stream of income with generally higher yields than those of equity securities of the same or similar issuers. The price of a convertible security will normally vary with changes in the price of the underlying equity security, although the higher yield tends to make the convertible security less volatile than the underlying equity security. As with debt securities, the market value of convertible securities tends to decrease as interest rates rise and increase as interest rates decline. While convertible securities generally offer lower interest or dividend yields than non-convertible debt securities of similar quality, they offer investors the potential to benefit from increases in the market prices of the underlying common stock. Convertible debt securities that are rated Baa3 or lower by Moody’s or BBB- or lower by S&P or Fitch and comparable unrated securities may share some or all of the risks of debt securities with those ratings.

FORWARD COMMITMENTS

Forward commitments for the purchase or sale of securities may include purchases on a when-issued basis or purchases or sales on a delayed delivery basis. In some cases, a forward commitment may be conditioned upon the occurrence of a subsequent event, such as approval and consummation of a merger, corporate reorganization or debt restructuring or approval of a proposed financing by appropriate authorities (*i.e.*, a “when, as and if issued” trade).

The Portfolio may invest in TBA–mortgage-backed securities. A TBA or “To Be Announced” trade represents a contract for the purchase or sale of mortgage-backed securities to be delivered at a future agreed-upon date; however, the specific mortgage pool numbers or the number of pools that will be delivered to fulfill the trade obligation or terms of the contract are unknown at the time of the trade. Mortgage pools (including fixed rate or variable rate mortgages) guaranteed by the Government National Mortgage Association, or GNMA, the Federal National Mortgage Association, or FNMA, or the Federal Home Loan Mortgage Corporation, or FHLMC, are subsequently allocated to the TBA transactions.

When forward commitments with respect to fixed-income securities are negotiated, the price, which is generally expressed in yield terms, is fixed at the time the commitment is made, but payment for and delivery of the securities take place at a later date. Securities purchased or sold under a forward commitment are subject to market fluctuation and no interest or dividends accrue to the purchaser prior to the settlement date. There is a risk of loss if the value of either a purchased security declines before the settlement date or the security sold increases before the settlement date. The use of forward commitments helps the Portfolio to protect against anticipated changes in interest rates and prices.

ILLIQUID SECURITIES

Under current Commission guidelines, the Portfolio limits its investments in illiquid securities to 15% of its net assets. The term “illiquid securities” for this purpose means securities that cannot be disposed of within seven days in the ordinary course of business at approximately the amount the Portfolio has valued the securities. The Portfolio invests in illiquid securities and it may not be able to sell such securities and may not be able to realize their full value upon sale. Restricted securities (securities subject to legal or contractual restrictions on resale) may be illiquid. Some restricted securities (such as securities issued pursuant to Rule 144A under the Securities Act of 1933 (the “Securities Act”) or certain commercial paper) may be treated as liquid, although they may be less liquid than registered securities traded on established secondary markets.

INVESTMENT IN OTHER INVESTMENT COMPANIES

The Portfolio may invest in other investment companies as permitted by the Investment Company Act of 1940, as amended (the “1940 Act”) or the rules and regulations thereunder. If the Portfolio acquires shares in investment companies, shareholders would bear, indirectly, the expenses of such

investment companies (which may include management and advisory fees), which are in addition to the Portfolio's expenses. The Portfolio may also invest in exchange traded funds, subject to the restrictions and limitations of the 1940 Act.

LOANS OF PORTFOLIO SECURITIES

For the purposes of achieving income, the Portfolio may make secured loans of portfolio securities to brokers, dealers and financial institutions, provided a number of conditions are satisfied, including that the loan is fully collateralized. Securities lending involves the possible loss of rights in the collateral or delay in the recovery of collateral if the borrower fails to return the securities loaned or becomes insolvent. When the Portfolio lends securities, its investment performance will continue to reflect changes in the value of the securities loaned, and the Portfolio will also receive a fee or interest on the collateral. The Portfolio may pay reasonable finders', administrative, and custodial fees in connection with a loan.

MORTGAGE-BACKED SECURITIES

Mortgage-backed securities may be issued by the U.S. Government or one of its sponsored entities or may be issued by private organizations. Interest and principal payments (including prepayments) on the mortgages underlying mortgage-backed securities are passed through to the holders of the securities. As a result of the pass-through of prepayments of principal on the underlying securities, mortgage-backed securities are often subject to more rapid prepayment of principal than their stated maturity would indicate. Prepayments occur when the mortgagor on a mortgage prepays the remaining principal before the mortgage's scheduled maturity date. Because the prepayment characteristics of the underlying mortgages vary, it is impossible to predict accurately the realized yield or average life of a particular issue of pass-through certificates. Prepayments are important because of their effect on the yield and price of the mortgage-backed securities. During periods of declining interest rates, prepayments can be expected to accelerate and the Portfolio that invests in these securities would be required to reinvest the proceeds at the lower interest rates then available. Conversely, during periods of rising interest rates, a reduction in prepayments may increase the effective maturity of the securities, subjecting them to a greater risk of decline in market value in response to rising interest rates. In addition, prepayments of mortgages underlying securities purchased at a premium could result in capital losses.

Mortgage-backed securities include mortgage pass-through certificates and multiple-class pass-through securities, such as real estate mortgage investment conduit certificates, or REMIC pass-through certificates, collateralized mortgage obligations, or CMOs, and stripped mortgage-backed securities, or SMBS, and other types of mortgage-backed securities that may be available in the future.

Multiple-Class Pass-Through Securities and Collateralized Mortgage Obligations. Mortgage-backed securities also include CMOs and REMIC pass-through or participation certificates that may be issued by, among others, U.S. Government agencies and instrumentalities as well as private lenders. CMOs and REMICs are issued in multiple classes and the principal of and in-

terest on the mortgage assets may be allocated among the several classes of CMOs or REMICs in various ways. Each class of CMOs or REMICs, often referred to as a "tranche," is issued at a specific adjustable or fixed interest rate and must be fully retired no later than its final distribution date. Generally, interest is paid or accrued on all classes of CMOs or REMICs on a monthly basis.

Typically, CMOs are collateralized by GNMA or FHLMC certificates but also may be collateralized by other mortgage assets such as whole loans or private mortgage pass-through securities. Debt service on CMOs is provided from payments of principal and interest on collateral of mortgage assets and any reinvestment income.

A REMIC is a CMO that qualifies for special tax treatment under the Internal Revenue Code of 1986 as amended, or the Code, and invests in certain mortgages primarily secured by interests in real property and other permitted investments. Investors may purchase "regular" and "residual" interest shares of beneficial interest in REMIC trusts.

OTHER ASSET-BACKED SECURITIES

The Portfolio may invest in other asset-backed securities. The securitization techniques used to develop mortgage-related securities are being applied to a broad range of financial assets. Through the use of trusts and special purposes corporations, various types of assets, including automobile loans and leases, credit card receivables, home equity loans, equipment leases and trade receivables, are being securitized in structures similar to the structures used in mortgage securitizations.

PREFERRED STOCK

The Portfolio may invest in preferred stock. Preferred stock is subordinated to any debt the issuer has outstanding. Accordingly, preferred stock dividends are not paid until all debt obligations are first met. Preferred stock may be subject to more fluctuations in market value, due to changes in market participants' perceptions of the issuer's ability to continue to pay dividends, than debt of the same issuer.

REAL ESTATE INVESTMENT TRUSTS (REITS)

REITs are pooled investment vehicles that invest primarily in income producing real estate or real estate related loans or interests. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. Similar to investment companies such as the Portfolio, REITs are not taxed on income distributed to shareholders provided they comply with several requirements of the Code. The Portfolio will indirectly bear its proportionate share of expenses incurred by REITs in which it invests in addition to the expenses incurred directly by the Portfolio.

Investing in REITs involves certain unique risks. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be

affected by the quality of any credit extended. REITs are dependent upon management skills, are not diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation.

Investing in REITs involves risks similar to those associated with investing in small capitalization companies. REITs may have limited financial resources, may trade less frequently and in a limited volume and may be subject to more abrupt or erratic price movements than larger company securities. Historically, small capitalization stocks, such as REITs, have had more price volatility than larger capitalization stocks.

REPURCHASE AGREEMENTS AND BUY/SELL BACK TRANSACTIONS

The Portfolio may enter into repurchase agreements in which the Portfolio purchases a security from a bank or broker-dealer, which agrees to repurchase the security from the Portfolio at an agreed-upon future date, normally a day or a few days later. The purchase and repurchase obligations are transacted under one agreement. The resale price is greater than the purchase price, reflecting an agreed-upon interest rate for the period the buyer's money is invested in the security. Such agreements permit the Portfolio to keep all of its assets at work while retaining "overnight" flexibility in pursuit of investments of a longer-term nature. If the bank or broker-dealer defaults on its repurchase obligation, the Portfolio would suffer a loss to the extent that the proceeds from the sale of the security were less than the repurchase price.

The Portfolio may enter into buy/sell back transactions, which are similar to repurchase agreements. In this type of transaction, the Portfolio enters a trade to buy securities at one price and simultaneously enters a trade to sell the same securities at another price on a specified date. Similar to a repurchase agreement, the repurchase price is higher than the sale price and reflects current interest rates. Unlike a repurchase agreement, however, the buy/sell back transaction is considered two separate transactions.

RIGHTS AND WARRANTS

Rights and warrants are option securities permitting their holders to subscribe for other securities. Rights are similar to warrants except that they have a substantially shorter duration. Rights and warrants do not carry with them dividend or voting rights with respect to the underlying securities, or any rights in the assets of the issuer. As a result, an investment in rights and warrants may be considered more speculative than certain other types of investments. In addition, the value of a right or a warrant does not necessarily change with the value of the underlying securities, and a right or a warrant ceases to have value if it is not exercised prior to its expiration date.

SHORT SALES

The Portfolio may make short sales as a part of overall portfolio management or to offset a potential decline in the value of a security. A short sale involves the sale of a security that the Portfolio does not own, or if the Portfolio owns the security, is not to be delivered upon consummation of the sale. When the

Portfolio makes a short sale of a security that it does not own, it must borrow from a broker-dealer the security sold short and deliver the security to the broker-dealer upon conclusion of the short sale.

If the price of the security sold short increases between the time of the short sale and the time the Portfolio replaces the borrowed security, the Portfolio will incur a loss; conversely, if the price declines, the Portfolio will realize a short-term capital gain. Although the Portfolio's gain is limited to the price at which it sold the security short, its potential loss is theoretically unlimited.

FOREIGN (NON-U.S.) SECURITIES

Investing in foreign securities involves special risks and considerations not typically associated with investing in U.S. securities. The securities markets of many foreign countries are relatively small, with the majority of market capitalization and trading volume concentrated in a limited number of companies representing a small number of industries. The Portfolio's investments in foreign securities may experience greater price volatility and significantly lower liquidity than a portfolio invested solely in securities of U.S. companies. These markets may be subject to greater influence by adverse events generally affecting the market, and by large investors trading significant blocks of securities, than is usual in the United States.

Securities registration, custody, and settlement may in some instances be subject to delays and legal and administrative uncertainties. Foreign investment in the securities markets of certain foreign countries is restricted or controlled to varying degrees. These restrictions or controls may at times limit or preclude investment in certain securities and may increase the cost and expenses of the Portfolio. In addition, the repatriation of investment income, capital or the proceeds of sales of securities from certain countries is controlled under regulations, including in some cases the need for certain advance government notification or authority, and if a deterioration occurs in a country's balance of payments, the country could impose temporary restrictions on foreign capital remittances.

The Portfolio also could be adversely affected by delays in, or a refusal to grant, any required governmental approval for repatriation, as well as by the application to it of other restrictions on investment. Investing in local markets may require the Portfolio to adopt special procedures or seek local governmental approvals or other actions, any of which may involve additional costs to the Portfolio. These factors may affect the liquidity of the Portfolio's investments in any country and the Adviser will monitor the effect of any such factor or factors on the Portfolio's investments. Transaction costs, including brokerage commissions for transactions both on and off the securities exchanges, in many foreign countries are generally higher than in the U.S.

Issuers of securities in foreign jurisdictions are generally not subject to the same degree of regulation as are U.S. issuers with respect to such matters as insider trading rules, restrictions on market manipulation, shareholder proxy requirements, and timely disclosure of information. The reporting, accounting,

and auditing standards of foreign countries may differ, in some cases significantly, from U.S. standards in important respects, and less information may be available to investors in foreign securities than to investors in U.S. securities. Substantially less information is publicly available about certain non-U.S. issuers than is available about most U.S. issuers.

The economies of individual foreign countries may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product or gross national product, rate of inflation, capital reinvestment, resource self-sufficiency, and balance of payments position. Nationalization, expropriation or confiscatory taxation, currency blockage, political changes, government regulation, political or social instability, revolutions, wars or diplomatic developments could affect adversely the economy of a foreign country. In the event of nationalization, expropriation, or other confiscation, the Portfolio could lose its entire investment in securities in the country involved. In addition, laws in foreign countries governing business organizations, bankruptcy and insolvency may provide less protection to security holders such as the Portfolio than that provided by U.S. laws.

FOREIGN (NON-U.S.) CURRENCIES

The Portfolio invests some portion of its assets in securities denominated in, and receives revenues in, foreign currencies and will be adversely affected by reductions in the value of those currencies relative to the U.S. Dollar. Foreign currency exchange rates may fluctuate significantly. They are determined by supply and demand in the foreign exchange markets, the relative merits of investments in different countries, actual or perceived changes in interest rates, and other complex factors. Currency exchange rates also can be affected unpredictably by intervention (or the failure to intervene) by U.S. or foreign governments or central banks or by currency controls or political developments. In light of these risks, the Portfolio may engage in certain currency hedging transactions, as described above, which involve certain special risks. The Portfolio may also invest directly in foreign currencies for non-hedging purposes directly on a spot basis (*i.e.*, cash) or through derivative transactions, such as forward currency exchange contracts, futures and options thereon, swaps and options as described above. These investments will be subject to the same risks. In addition, currency exchange rates may fluctuate significantly over short periods of time, causing the Portfolio's NAV to fluctuate.

FIXED-INCOME SECURITIES

The value of the Portfolio's investments in fixed-income securities will change as the general level of interest rates fluctuates. During periods of falling interest rates, the values of these securities will generally rise. Conversely, during periods of rising interest rates, the values of these securities will generally decline. Changes in interest rates have a greater effect on fixed-income securities with longer maturities and durations than those with shorter maturities and durations.

INVESTMENT IN BELOW INVESTMENT GRADE FIXED-INCOME SECURITIES

Investments in securities rated below investment grade may be subject to greater risk of loss of principal and interest than higher-rated securities. These securities are also generally considered to be subject to greater market risk than higher-rated securities. The capacity of issuers of these securities to pay interest and repay principal is more likely to weaken than is that of issuers of higher-rated securities in times of deteriorating economic conditions or rising interest rates. In addition, below investment grade securities may be more susceptible to real or perceived adverse economic conditions than investment grade securities.

The market for these securities may be thinner and less active than that for higher-rated securities, which can adversely affect the prices at which these securities can be sold. To the extent that there is no established secondary market for these securities, the Portfolio may experience difficulty in valuing such securities and, in turn, the Portfolio's assets.

UNRATED SECURITIES

The Portfolio may invest in unrated fixed-income securities when the Adviser believes that the financial condition of the issuers of such securities, or the protection afforded by the terms of the securities themselves, limits the risk to the Portfolio to a degree comparable to that of rated securities that are consistent with the Portfolio's objective and policies.

FUTURE DEVELOPMENTS

The Portfolio may take advantage of other investment practices that are not currently contemplated for use by the Portfolio, or are not available but may yet be developed, to the extent such investment practices are consistent with the Portfolio's investment objective and legally permissible for the Portfolio. Such investment practices, if they arise, may involve risks that are different from or exceed those involved in the practices described above.

CHANGES IN INVESTMENT OBJECTIVES AND POLICIES

The **AllianceBernstein® Variable Products Series (VPS) Fund's** (the "Fund") Board of Directors (the "Board") may change the Portfolio's investment objective without shareholder approval. The Portfolio will provide shareholders with 60 days' prior written notice of any change to the Portfolio's investment objective. Unless otherwise noted, all other investment policies of the Portfolio may be changed without shareholder approval.

TEMPORARY DEFENSIVE POSITION

For temporary defensive purposes to attempt to respond to adverse market, economic, political or other conditions, the Portfolio may invest in certain types of short-term, liquid, investment grade or high quality debt securities. While the Portfolio is investing for temporary defensive purposes, it may not meet its investment objectives.

PORTFOLIO HOLDINGS

The Portfolio's SAI includes a description of the policies and procedures that apply to disclosure of the Portfolio's portfolio holdings.

INVESTING IN THE PORTFOLIO

HOW TO BUY AND SELL SHARES

The Portfolio offers its shares through the separate accounts of life insurance companies (the “Insurers”). You may only purchase and sell shares through these separate accounts. See the prospectus of the separate account of the participating insurance company for information on the purchase and sale of the Portfolio’s shares. AllianceBernstein Investments, Inc. (“ABI”) may from time to time receive payments from Insurers in connection with the sale of the Portfolio’s shares through the Insurer’s separate accounts.

The purchase or sale of the Portfolio’s shares is priced at the next determined NAV after the order is received in proper form.

The Insurers maintain omnibus account arrangements with the Fund in respect of the Portfolio and place aggregate purchase, redemption and exchange orders for shares of the Portfolio corresponding to orders placed by the Insurer’s customers (“Contractholders”) who have purchased contracts from the Insurers, in each case, in accordance with the terms and conditions of the relevant contract. Omnibus account arrangements maintained by the Insurers are discussed below under “Limitations on Ability to Detect and Curtail Excessive Trading Practices.”

ABI may refuse any order to purchase shares. The Portfolio reserves the right to suspend the sale of its shares to the public in response to conditions in the securities markets or for other reasons.

DISTRIBUTION ARRANGEMENTS

The Portfolio has adopted a plan under Securities and Exchange Commission (“Commission”) Rule 12b-1 that allows the Portfolio to pay asset-based sales charges or distribution and/or service fees for the distribution and sale of its shares. The amount of this fee for the Class B shares of the Portfolio is .25% of the aggregate average daily net assets. Because these fees are paid out of the Portfolio’s assets on an ongoing basis, over time these fees will increase the costs of your investment and may cost you more than paying other types of sales charges.

PAYMENTS TO FINANCIAL INTERMEDIARIES

Financial intermediaries, such as the Insurers, market and sell shares of the Portfolio and typically receive compensation for selling shares of the Portfolio. This compensation is paid from various sources.

Insurers or your financial intermediary receive compensation from the Portfolio, ABI and/or the Adviser in several ways from various sources, which include some or all of the following:

- Rule 12b-1 fees;
- defrayal of costs for educational seminars and training;
- additional distribution support; and
- payments related to providing Contractholder recordkeeping and/or administrative services.

In the case of Class B shares, up to 100% of the Rule 12b-1 fees applicable to Class B shares each year may be paid to the financial intermediary that sells Class B shares.

ABI and/or the Adviser may pay Insurers or other financial intermediaries to perform record-keeping and administrative services in connection with the Portfolio. Such payments will generally not exceed 0.35% of the average daily net assets of the Portfolio attributable to the Insurer.

Other Payments for Educational Support and Distribution Assistance

In addition to the fees described above, ABI, at its expense, currently provides additional payments to the Insurers that sell shares of the Portfolio. These sums include payments to reimburse directly or indirectly the costs incurred by the Insurers and their employees in connection with educational seminars and training efforts about the Portfolio for the Insurers’ employees and/or their clients and potential clients. The costs and expenses associated with these efforts may include travel, lodging, entertainment and meals.

For 2010, ABI’s additional payments to these firms for educational support and distribution assistance related to the Portfolios are expected to be approximately \$400,000. In 2009, ABI paid additional payments of approximately \$400,000 for the Portfolios.

If one mutual fund sponsor that offers shares to separate accounts of an Insurer makes greater distribution assistance payments than another, the Insurer may have an incentive to recommend or offer the shares of funds of one fund sponsor over another.

Please speak with your financial intermediary to learn more about the total amounts paid to your financial intermediary by the Adviser, ABI and by other mutual fund sponsors that offer shares to Insurers that may be recommended to you. You should also consult disclosures made by your financial intermediary at the time of purchase.

As of the date of this Prospectus, ABI anticipates that the Insurers or their affiliates that will receive additional payments for educational support include:

AXA Advisors
AIG SunAmerica
Genworth Financial
Lincoln Financial Distributors
Merrill Lynch
Pacific Life Insurance Co.
Prudential
RiverSource Distributors
SunLife Financial
Transamerica Capital

Although the Portfolio may use brokers and dealers who sell shares of the Portfolio to effect portfolio transactions, the Portfolio does not consider the sale of AllianceBernstein Mutual Fund shares as a factor when selecting brokers or dealers to effect portfolio transactions.

FREQUENT PURCHASES AND REDEMPTIONS OF PORTFOLIO SHARES

The Fund's Board of Directors (the "Board") has adopted policies and procedures designed to detect and deter frequent purchases and redemptions of Portfolio shares or excessive or short-term trading that may disadvantage long-term Contractholders. These policies are described below. There is no guarantee that the Portfolio will be able to detect excessive or short-term trading and to identify Contractholders engaged in such practices, particularly with respect to transactions in omnibus accounts. Contractholders should be aware that application of these policies may have adverse consequences, as described below, and avoid frequent trading in Portfolio shares through purchases, sales and exchanges of shares. The Portfolio reserves the right to restrict, reject, or cancel, without any prior notice, any purchase or exchange order for any reason, including any purchase or exchange order accepted by any Insurer or a Contractholder's financial intermediary.

Risks Associated With Excessive Or Short-Term Trading Generally. While the Fund will try to prevent market timing by utilizing the procedures described below, these procedures may not be successful in identifying or stopping excessive or short-term trading in all circumstances. By realizing profits through short-term trading, Contractholders that engage in rapid purchases and sales or exchanges of the Portfolio's shares dilute the value of shares held by long-term Contractholders. Volatility resulting from excessive purchases and sales or exchanges of shares of the Portfolio, especially involving large dollar amounts, may disrupt efficient portfolio management. In particular, the Portfolio may have difficulty implementing its long-term investment strategies if it is forced to maintain a higher level of its assets in cash to accommodate significant short-term trading activity. Excessive purchases and sales or exchanges of shares of the Portfolio may force the Portfolio to sell portfolio securities at inopportune times to raise cash to accommodate short-term trading activity. In addition, the Portfolio may incur increased expenses if one or more Contractholders engage in excessive or short-term trading. For example, the Portfolio may be forced to liquidate investments as a result of short-term trading and incur increased brokerage costs without attaining any investment advantage. Similarly, the Portfolio may bear increased administrative costs due to asset level and investment volatility that accompanies patterns of short-term trading activity. All of these factors may adversely affect the Portfolio's performance.

Investments in foreign securities may be particularly susceptible to short-term trading strategies. This is because foreign securities are typically traded on markets that close well before the time a Portfolio calculates its NAV at 4:00 p.m., Eastern Time, which gives rise to the possibility that developments may have occurred in the interim that would affect the value of these

securities. The time zone differences among international stock markets can allow a Contractholder engaging in a short-term trading strategy to exploit differences in share prices that are based on closing prices of foreign securities established some time before the Portfolio calculates its own share price (referred to as "time zone arbitrage"). The Portfolio has procedures, referred to as fair value pricing, designed to adjust closing market prices of foreign securities to reflect what is believed to be fair value of those securities at the time the Portfolio calculates its NAV. While there is no assurance, the Portfolio expects that the use of fair value pricing, in addition to the short-term trading policies discussed below, will significantly reduce a Contractholder's ability to engage in time zone arbitrage to the detriment of other Contractholders.

Contractholders engaging in a short-term trading strategy may also target a Portfolio that does not invest primarily in foreign securities. If the Portfolio invests in securities that are, among other things, thinly traded, traded infrequently, or relatively illiquid, it has the risk that the current market price for the securities may not accurately reflect current market values. Contractholders may seek to engage in short-term trading to take advantage of these pricing differences (referred to as "price arbitrage"). A Portfolio may be adversely affected by price arbitrage.

Policy Regarding Short-Term Trading. Purchases and exchanges of shares of the Portfolio should be made for investment purposes only. The Fund seeks to prevent patterns of excessive purchases and sales or exchanges of shares of the Portfolio. The Fund will seek to prevent such practices to the extent they are detected by the procedures described below. Insurers utilizing omnibus account arrangements may not identify to the Fund, ABI or ABIS Contractholders' transaction activity relating to shares of the Portfolio on an individual basis. Consequently, the Fund, ABI and ABIS may not be able to detect excessive or short-term trading in shares of the Portfolio attributable to a particular Contractholder who effects purchase and redemption and/or exchange activity in shares of the Portfolio through an Insurer acting in an omnibus capacity. In seeking to prevent excessive or short-term trading in shares of the Portfolio, including the maintenance of any transaction surveillance or account blocking procedures, the Fund, ABI and ABIS consider the information actually available to them at the time. The Fund reserves the right to modify this policy, including any surveillance or account blocking procedures established from time to time to effectuate this policy, at any time without notice.

• **Transaction Surveillance Procedures.** The Fund, through its agents, ABI and AllianceBernstein Investor Services, Inc. ("ABIS"), maintains surveillance procedures to detect excessive or short-term trading in Portfolio shares. This surveillance process involves several factors, which include scrutinizing individual Insurer's omnibus transaction activity in Portfolio shares in order to seek to ascertain whether any such activity attributable to one or more Contractholders might constitute excessive or short-term trading. Insurer's omnibus transaction activity identified by these surveillance procedures, or as a result of any other in-

formation actually available at the time, will be evaluated to determine whether such activity might indicate excessive or short-term trading activity attributable to one or more Contractholders. These surveillance procedures may be modified from time to time, as necessary or appropriate to improve the detection of excessive or short-term trading or to address specific circumstances.

- **Account Blocking Procedures.** If the Fund determines, in its sole discretion, that a particular transaction or pattern of transactions identified by the transaction surveillance procedures described above is excessive or short-term trading in nature, the relevant Insurer's omnibus account(s) will be immediately "blocked" and no future purchase or exchange activity will be permitted, except to the extent the Fund, ABI or ABIS has been informed in writing that the terms and conditions of a particular contract may limit the Fund's ability to apply its short-term trading policy to Contractholder activity as discussed below. As a result, any Contractholder seeking to engage through an Insurer in purchase or exchange activity in shares of the Portfolio under a particular contract will be prevented from doing so. However, sales of Portfolio shares back to the Portfolio or redemptions will continue to be permitted in accordance with the terms of the Portfolio's current Prospectus. In the event an account is blocked, certain account-related privileges, such as the ability to place purchase, sale and exchange orders over the internet or by phone, may also be suspended. As a result, unless the Contractholder redeems his or her shares, the Contractholder effectively may be "locked" into an investment in shares of one or more of the Portfolio that the Contractholder did not intend to hold on a long-term basis or that may not be appropriate for the Contractholder's risk profile. To rectify this situation, a Contractholder with a "blocked" account may be forced to redeem Portfolio shares, which could be costly if, for example, these shares have declined in value. To avoid this risk, a Contractholder should carefully monitor the purchases, sales, and exchanges of Portfolio shares and avoid frequent trading in Portfolio shares. An Insurer's omnibus account that is blocked will generally remain blocked unless and until the Insurer provides evidence or assurance acceptable to the Fund that one or more Contractholders did not or will not in the future engage in excessive or short-term trading.

- **Applications of Surveillance Procedures and Restrictions to Omnibus Accounts.** The Portfolio applies its surveillance procedures to Insurers. As required by Commission rules, the Portfolio has entered into agreements with all of its financial intermediaries that require the financial intermediaries to provide the Portfolio, upon the request of the Portfolio or its agents, with individual account level information about their transactions. If the Portfolio detects excessive trading through its monitoring of omnibus accounts, including trading at the individual account level, Insurers will also execute instructions from the Portfolio to take actions to curtail the activity, which may include applying blocks to account to prohibit future purchases and exchanges of Portfolio shares.

HOW THE PORTFOLIO VALUES ITS SHARES

The Portfolio's NAV is calculated at the close of regular trading on the Exchange (ordinarily, 4:00 p.m., Eastern Time), only on days when the Exchange is open for business. To calculate NAV, the Portfolio's assets are valued and totaled, liabilities are subtracted, and the balance, called net assets, is divided by the number of shares outstanding. If the Portfolio invests in securities that are primarily traded on foreign exchanges that trade on weekends or other days when the Portfolio does not price its shares, the NAV of the Portfolio's shares may change on days when shareholders will not be able to purchase or redeem their shares in the Portfolio.

The Portfolio values its securities at their current market value determined on the basis of market quotations or, if market quotations are not readily available or are unreliable, at "fair value" as determined in accordance with procedures established by and under the general supervision of the Board. When the Portfolio uses fair value pricing, it may take into account any factors it deems appropriate. The Portfolio may determine fair value based upon developments related to a specific security, current valuations of foreign stock indices (as reflected in U.S. futures markets) and/or U.S. sector or broader stock market indices. The prices of securities used by the Portfolio to calculate its NAV may differ from quoted or published prices for the same securities. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security is materially different than the value that could be realized upon the sale of that security.

The Portfolio expects to use fair value pricing for securities primarily traded on U.S. exchanges only under very limited circumstances, such as the early closing of the exchange on which a security is traded or suspension of trading in the security. The Portfolio may use fair value pricing more frequently for securities primarily traded in foreign markets because, among other things, most foreign markets close well before the Portfolio values its securities at 4:00 p.m., Eastern Time. The earlier close of these foreign markets gives rise to the possibility that significant events, including broad market moves, may have occurred in the interim. For example, the Portfolio believes that foreign security values may be affected by events that occur after the close of foreign securities markets. To account for this, the Portfolio may frequently value many of its foreign equity securities using fair value prices based on third party vendor modeling tools to the extent available.

Subject to the Board's oversight, the Board has delegated responsibility for valuing the Portfolio's assets to the Adviser. The Adviser has established a Valuation Committee, which operates under the policies and procedures approved by the Board, to value the Portfolio's assets on behalf of the Portfolio. The Valuation Committee values Portfolio assets as described above.

Your order for purchase, sale, or exchange of shares is priced at the next-determined NAV after your order is received in proper form by the Portfolio.

MANAGEMENT OF THE PORTFOLIO

INVESTMENT ADVISER

The Portfolio's adviser is AllianceBernstein L.P., 1345 Avenue of the Americas, New York, New York 10105. The Adviser is a leading international investment adviser managing client accounts with assets as of December 31, 2009, totaling more than \$496 billion (of which over \$76 billion represented assets of investment companies). As of December 31, 2009, the Adviser managed retirement assets for many of the largest public and private employee benefit plans (including 42 of the nation's FORTUNE 100 companies), for public employee retirement funds in 39 states, for investment companies, and for foundations, endowments, banks and insurance companies worldwide. Currently, there are 35 registered investment companies managed by the Adviser, comprising 110 separate investment portfolios, with approximately 3.5 million retail accounts.

The Adviser provides investment advisory services and order placement facilities for the Portfolio. For these advisory services, for the fiscal year ended December 31, 2009, the Portfolio paid the Adviser as a percentage of average daily net assets .55%.

A discussion regarding the basis for the Board's approval of the Portfolio's investment advisory agreement is available in the Portfolio's annual report to shareholders for the fiscal year ended indicated above.

The Adviser may act as an investment adviser to other persons, firms, or corporations, including investment companies, hedge funds, pension funds, and other institutional investors. The Adviser may receive management fees, including performance fees, that may be higher or lower than the advisory fees it receives from the Portfolio. Certain other clients of the Adviser may have investment objectives and policies similar to those of the Portfolio. The Adviser may, from time to time, make recommendations that result in the purchase or sale of a particular security by its other clients simultaneously with the Portfolio. If transactions on behalf of more than one client during the same period increase the demand for securities being purchased or the supply of securities being sold, there may be an adverse effect on price or quantity. It is the policy of the Adviser to allocate advisory recommendations and the placing of orders in a manner that is deemed equitable by the Adviser to the accounts involved, including the Portfolio. When two or more of the clients of the Adviser (including the Portfolio) are purchasing or selling the same security on a given day from the same broker-dealer, such transactions may be averaged as to price.

PORTFOLIO MANAGERS

The day-to-day management of, and investment decisions for, the Portfolio are made by the Adviser's Multi-Asset Solutions Team. The Multi-Asset Solutions Team relies heavily on the fundamental analysis and research of the Adviser's large internal research staff. No one person is principally responsible for making recommendations for the Portfolio's portfolio.

The following table lists the persons within the Multi-Asset Solutions Team with the most significant responsibility for the day-to-day management of the Portfolio's portfolio, the length of time that each person has been jointly and primarily responsible for the Portfolio, and each person's principal occupation during the past five years:

Employee; Year; Title	Principal Occupation During the Past Five (5) Years
Thomas J. Fontaine; since July 2008; Senior Vice President of the Adviser and Director of Research—Defined Contribution	Senior Vice President of the Adviser and since June 2008 Director of Research—Defined Contribution. Previously, he was a Director of Research for the Adviser's Style Blend Services, a member of the Blend Investment Policy Team from February 2006 to June 2008 and served as a senior quantitative analyst since prior to 2005.
Dokyoung Lee; since July 2008; Senior Vice President of the Adviser and Director of Research—Blend Strategies	Senior Vice President of the Adviser, with which he has been associated in a similar capacity to his current position as a portfolio manager since prior to 2004 and Director of Research—Blend Strategies since June 2005.
Seth J. Masters; since inception; Executive Senior Vice President of the Adviser and Chief Investment Officer of Blend Strategies and Defined Contribution	Executive Vice President of the Adviser, with which he has been associated in a substantially similar capacity to his current position as a portfolio manager since prior to 2005 and Chief Investment Officer of Blend Strategies and Defined Contribution.
Christopher H. Nikolich; since inception; Senior Vice President of the Adviser	Senior Vice President of the Adviser, with which he has been associated in a substantially similar capacity to his current position as a portfolio manager since prior to 2005.
Patrick J. Rudden; since February 2009; Senior Vice President of the Adviser	Senior Vice President of the Adviser, with which he has been associated in a substantially similar capacity to his current position as a portfolio manager since prior to 2005 and Global Head of Institutional Investment Solutions. He is a member of the Global, European and UK Value Equity Investment Policy Groups.

Additional information about the portfolio managers may be found in the Fund's SAI.

PERFORMANCE OF EQUITY AND FIXED-INCOME INVESTMENT TEAMS

Although the Portfolio itself has limited performance history, certain of the investment teams employed by the Adviser in managing the Portfolio have experience in managing discretionary accounts of institutional clients and/or other registered investment companies and portions thereof (the "Equity and Fixed-Income Historical Accounts") that have substantially the same investment objectives and policies and are managed in accordance with essentially the same investment strategies as those applicable to the portions of the Portfolio they manage.

The Equity and Fixed-Income Historical Accounts that are not registered investment companies or portions thereof are not subject to certain limitations, diversification requirements and other restrictions imposed under the 1940 Act and the Internal Revenue Code to which the Portfolio, as a registered investment company, is subject and which, if applicable to the Equity and Fixed Income Historical Accounts, may have adversely affected the performance of the Equity and Fixed-Income Historical Accounts.

Set forth below is performance data provided by the Adviser relating to the Equity and Fixed-Income Historical Accounts managed by investment teams that manage the Portfolio's assets. Performance data is shown for the period during which the relevant investment team of the Adviser or its Bernstein unit managed the Equity and Fixed-Income Historical Accounts through December 31, 2008. The aggregate assets for the Equity and Fixed-Income Historical Accounts managed by each investment team as of December 31, 2008 are also shown. Each of an investment team's Equity and Fixed-Income Historical Accounts has a nearly identical composition of investment holdings and related percentage weightings.

The performance data is net of all fees (including brokerage commissions) charged to the Equity and Fixed-Income Historical Accounts, calculated on a monthly basis. The data has not been adjusted to reflect any fees that will be payable by the Portfolio, which may be higher than the fees imposed on the Equity and Fixed-Income Historical Accounts, and will reduce the returns of the Portfolio. Expenses associated with the distribution of Class B shares of the Portfolio in accordance with the plan adopted by the Board under SEC Rule 12b-1 are also excluded. The data has not been adjusted to reflect the fees imposed by insurance company separate accounts in connection with variable products that invest in the Portfolio. Except as noted, the performance data has also not been adjusted for corporate or individual taxes, if any, payable by account owners.

The Adviser has calculated the investment performance of the Equity and Fixed-Income Historical Accounts on a trade-date basis. Dividends have been accrued at the end of the month and cash flows weighted daily. Composite investment performance for US Large Cap Value, International Large Cap Value and International Large Cap Growth accounts has been determined on an equal weighted basis for periods prior to January 1, 2003 and on an asset weighted basis for periods subsequent thereto. Composite investment performance for all other accounts has been determined on an asset weighted basis. New accounts are included in the composite investment performance computations at the beginning of the quarter following the initial contribution. The total returns set forth below are calculated using a method that links the monthly return amounts for the disclosed periods, resulting in a time-weighted rate of return. Other methods of computing the investment performance of the Equity and Fixed-Income Historical Accounts may produce different results, and the results for different periods may vary.

The Russell 1000[®] universe of securities is compiled by Frank Russell Company and is segmented into two style indices, based on a "non-linear probability" method to assign stocks to the growth and value style indices. The term "probability" is used to indicate the degree of certainty that a stock is value or growth based on its relative book-to-price ratio and I/B/E/S forecast long-term growth mean. The Russell 1000[®] Growth Index ("Russell 1000 Growth") is designed to include those Russell 1000[®] securities with higher price-to-book ratios and higher forecasted growth values. In contrast, the Russell 1000[®] Value Index ("Russell 1000 Value") is designed to include those Russell 1000[®] securities with lower price-to-book ratios and lower forecasted growth values.

The Morgan Stanley Capital International Europe, Australasia, Far East Index (the "MSCI EAFE Index") is an international, unmanaged, weighted stock market index that includes over 1,000 securities listed on the stock exchanges of 21 developed market countries from Europe, Australia and the Far East.

The unmanaged Barclays Capital U.S. Aggregate Index ("Barclays Capital U.S. Aggregate") is composed of the Mortgage-Backed Securities Index, the Asset-Backed Securities Index and the Government/Corporate Bond Index. It is a broad measure of the performance of taxable bonds in the US market, with maturities of at least one year.

The FTSE EPRA/NAREIT Global Real Estate Index ("FTSE EPRA/NAREIT Index") is a free-floating, market capitalization weighted index structured in such a way that it can be considered to represent general trends in all eligible real estate stocks worldwide. The index is designed to reflect the stock performance of companies engaged in specific aspects of the North American, European and Asian real estate markets.

To the extent an investment team utilizes investment techniques such as futures or options, the indices shown may not be substantially comparable to the performance of the investment team's Equity and Fixed-Income Historical Accounts. The indices shown are included to illustrate material economic and market factors that existed during the time period shown. None of the indices reflects the deduction of any fees. If an investment team were to purchase a portfolio of securities substantially identical to the securities comprising the relevant index, the performance of the portion of the Portfolio managed by that investment team relative to the index would be reduced by the Portfolio's expenses, including brokerage commissions, advisory fees, distribution fees, custodial fees, transfer agency costs and other administrative expenses, as well as by the impact on the Portfolio's shareholders of sales charges and income taxes.

The following performance data is provided solely to illustrate each investment team's performance in managing the Equity and Fixed-Income Historical Accounts as measured against certain broad-based market indices. The performance of the Portfolio will be affected both by the performance of each investment team managing a portion of the Portfolio's assets and by the Adviser's allocation of the Portfolio's portfolio among its various investment teams. If some or all of the investment teams employed by the Adviser in managing the Portfolio were to perform relatively poorly, and/or if the Adviser were to allocate more of the Portfolio's portfolio to relatively poorly performing investment teams, the performance of

the Portfolio would suffer. Investors should not rely on the performance data of the Equity and Fixed-Income Historical Accounts as an indication of future performance of all or any portion of the Portfolio.

The investment performance for the periods presented may not be indicative of future rates of return. The performance was not calculated pursuant to the methodology established by the SEC that will be used to calculate the Portfolio's performance. The use of methodology different from that used to calculate performance could result in different performance data.

Equity and Fixed-Income Historical Accounts

Net of fees performance

For periods ended December 31, 2009, with their Aggregate Assets as of December 31, 2009

Investment Teams and Benchmarks	Assets (in millions)	1 Year	3 Years	5 Years	10 Years	Since Inception	Inception Dates

Intermediate Duration Bonds <i>Barclays Capital U.S. Aggregate</i>	\$213.00	14.10% 5.93%	5.69% 6.04%	4.91% 4.97%	6.34% 6.33%	7.22% 7.18%	12/31/86

* The inception date for the Russell 1000 Growth Index was December 31, 1978; the total returns for the US Large Cap Growth Strategy and that benchmark for that date through 12/31/09 were 13.43% and 10.38%, respectively.

LEGAL PROCEEDINGS

On October 2, 2003, a purported class action complaint entitled *Hindo et al. v. AllianceBernstein Growth & Income Fund et al.* (the "Hindo Complaint") was filed against the Adviser; AllianceBernstein Holding L.P. ("Holding"); AllianceBernstein Corporation; AXA Financial, Inc.; the AllianceBernstein Mutual Funds, certain officers of the Adviser ("AllianceBernstein defendants"); and certain other unaffiliated defendants, as well as unnamed Doe defendants. The Hindo Complaint was filed in the United States District Court for the Southern District of New York by alleged shareholders of two of the AllianceBernstein Mutual Funds. The Hindo Complaint alleges that certain of the Alliance defendants failed to disclose that they improperly allowed certain hedge funds and other unidentified parties to engage in "late trading" and "market timing" of AllianceBernstein Mutual Fund securities, violating Sections 11 and 15 of the Securities Act of 1933, Sections 10(b) and 20(a) of the Securities and Exchange Act of 1934, and Sections 206 and 215 of the Investment Advisers Act of 1940. Plaintiffs seek an unspecified amount of compensatory damages and rescission of

their contracts with the Adviser, including recovery of all fees paid to the Adviser pursuant to such contracts.

Following October 2, 2003, additional lawsuits making factual allegations generally similar to those in the Hindo Complaint were filed in various federal and state courts against the Adviser and certain other defendants. On September 29, 2004, plaintiffs filed consolidated amended complaints with respect to four claim types: mutual fund shareholder claims; mutual fund derivative claims; derivative claims brought on behalf of Holding; and claims brought under ERISA by participants in the Profit Sharing Plan for Employees of the Adviser. All four complaints include substantially identical factual allegations, which appear to be based in large part on the Order of the Commission dated December 18, 2003 as amended and restated January 15, 2004 and the New York State Attorney General Assurance of Discontinuance dated September 1, 2004.

On April 21, 2006, the Adviser and attorneys for the plaintiffs in the mutual fund shareholder claims, mutual fund derivative claims, and ERISA claims entered into a confidential

memorandum of understanding containing their agreement to settle these claims. The agreement will be documented by a stipulation of settlement and will be submitted for court approval at a later date. The settlement amount (\$30 million), which the Adviser previously accrued and disclosed, has been disbursed. The derivative claims brought on behalf of Holding, in which plaintiffs seek an unspecified amount of damages, remain pending.

It is possible that these matters and or other developments resulting from these matters could result in increased redemptions of the affected fund's shares or other adverse consequences to those funds. This may require those funds to sell investments to provide for sufficient liquidity and could also have an adverse effect on the investment performance of the Portfolio. However, the Adviser believes that these matters are not likely to have a material adverse effect on its ability to perform advisory services relating to those funds or the Portfolio.

DIVIDENDS, DISTRIBUTIONS AND TAXES

The Portfolio declares dividends on its shares at least annually. The income and capital gains distribution will be made in shares of the Portfolio.

See the prospectus of the separate account of the participating insurance company for federal income tax information.

Investment income received by the Portfolio from sources within foreign countries may be subject to foreign income taxes withheld at the source. Provided that certain requirements are met, the Portfolio may “pass-through” to its shareholders credits or deductions to foreign income taxes paid. Non-U.S. investors may not be able to credit or deduct such foreign taxes.

GLOSSARY

Fixed-income securities are investments, such as bonds or other debt securities or preferred stocks that pay a fixed rate of return.

Barclays Capital U.S. Aggregate Bond Index covers the U.S. Dollar-denominated, investment-grade, fixed-rate, taxable bond market of SEC-registered securities. The Index figures do not reflect any deduction for fees, expenses or taxes.

S&P 500 Index includes 500 leading companies in leading industries of the U.S. economy. S&P 500 is a core component of the U.S. indices that could be used as building blocks for portfolio construction. The Index figures do not reflect any deduction for fees, expenses or taxes.

FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the Portfolio's financial performance for the period of the Portfolio's operations. Certain information reflects financial results for a single share of a class of the Portfolio. The total returns in the table represent the rate that an investor would have earned (or lost) on an investment in the Portfolio (assuming reinvestment of all dividends and distributions). The total returns in the table do not take into account separate account charges. If separate account charges were included, an investor's returns would have been lower. This information has been audited by Ernst & Young LLP, the independent registered public accounting firm for the Portfolio, whose report, along with the Portfolio's financial statements, are included in the Portfolio's annual report, which is available upon request.

Net investment income	2.36%	2.48%	2.11%	1.84%(e)	1.31%
Portfolio turnover rate	85%	93%	77%	203%	139%

Footnotes:

(a) Based on average shares outstanding.

(b) Net of expenses waived and reimbursed by the Advisor.

(c) Amount is less than \$0.005.

(d) Total investment return is calculated assuming an initial investment made at the NAV at the beginning of the period, reinvestment of all dividends and distributions at the NAV during the period, and redemption on the last day of the period. Total return does not reflect (i) insurance company's separate account related expense charges and (ii) the deduction of taxes that a shareholder would pay on Portfolio distributions or the redemption of Portfolio shares. Total investment return calculated for a period of less than one year is not annualized.

(e) The ratio includes expenses attributable to costs of proxy solicitation.

* Includes the impact of proceeds received and credited to the Portfolio resulting from the class action settlements, which enhanced the performance for the years ended December 31, 2009 and December 31, 2008 by 0.06% and 0.10%, respectively.

APPENDIX A

Hypothetical Investment and Expense Information

The settlement agreement between the Adviser and the New York Attorney General requires the Fund to include the following supplemental hypothetical investment information that provides additional information calculated and presented in a manner different from expense information found under “Fees and Expenses of the Portfolio” in this Prospectus about the effect of the Portfolio’s expenses, including investment advisory fees and other Portfolio costs, on the Portfolio’s returns over a 10-year period. The chart shows the estimated expenses that would be charged on a hypothetical investment of \$10,000 in Class B shares of the Portfolio assuming a 5% return each year. Except as otherwise indicated, the chart also assumes that the current annual expense ratio stays the same throughout the 10-year period. The current annual expense ratio for the Portfolio is the same as stated under “Fees and Expenses of the Portfolio.” There are additional fees and expenses associated with variable products. These fees can include mortality and expense risk charges, administrative charges, and other charges that can significantly affect expenses. These fees and expenses are not reflected in the following expense information. Your actual expenses may be higher or lower.

AllianceBernstein Balanced Wealth Strategy Portfolio

Year	Hypothetical Investment	Hypothetical Performance Earnings	Investment After Returns	Hypothetical Expenses	Hypothetical Ending Investment
1	\$10,000.00	\$ 500.00	\$10,500.00	\$ 99.75	\$10,400.25

Cumulative		\$6,003.76		\$1,197.74	

For more information about the Portfolio, the following documents are available upon request:

- **ANNUAL/SEMI-ANNUAL REPORTS TO CONTRACTHOLDERS**

The Portfolio's annual and semi-annual reports to Contractholders contain additional information on the Portfolio's investments. In the annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Portfolio's performance during its last fiscal year.

- **STATEMENT OF ADDITIONAL INFORMATION (SAI)**

The Fund has an SAI, which contains more detailed information about the Portfolio, including its operations and investment policies. The Fund's SAI and the independent registered public accounting firm's report and financial statements in the Portfolio's most recent annual report to Contractholders are incorporated by reference into (and are legally part of) this Prospectus.

You may request a free copy of the current annual/semi-annual report or the SAI, or make inquiries concerning the Portfolio, by contacting your broker or other financial intermediary, or by contacting the Adviser:
